**CHENEY FLASHING LEED CERTIFICATION LETTER**

To Whom it May Concern:

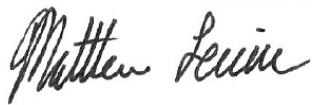

All stainless steel products supplied by Cheney Flashing utilizes recycled or recyclable material. Our stainless steel originates from mills in the Eastern United States.

The average post-consumer recycled content of the 300 series stainless steel grades generally used in the building and construction market is approximately 75% to 85%. The average pre-consumer recycled content of the 300 series stainless steel grades generally used in the building and construction market is approximately 15% to 25%.

Not only does 300 series stainless steel contain a high percentage of both post-consumer and post-industrial recycled content but at the end of its long, useful life in building applications it is 100% recyclable. Stainless building components can be repeatedly recycled back into similar products with no loss of quality.

Cheney operates solely from its factory in Beltsville, Maryland.

Sincerely,

Matthew Levine  
President
